

94.08.08 workshop FRI session 28 speaking Animal Testing

Animal testing

1. Before any product is put on the market, we want to make sure that it is safe for humans to use
2. a common way is testing the product on animals
3. some say this is totally unacceptable
4. it assumes that an animal's life is less valuable than a human's life
5. It assumes an animal life is somehow less valuable than that of a human
6. Opponents point out that such animals suffer great pain and fear
7. We have no right to do this for our own benefit
8. However, it cannot be denied that such experiments have helped scientists
9. Great discoveries have been made In the field of medicine
10. Effective drugs have been provided against cancer, heart disease or other potentially fatal illnesses
11. Many lives have been saved in this way
12. Such testing should be kept to a minimum
13. It should be reserved only for essential scientific work
14. Increasingly there are new ways of testing products
15. Like using cell culture = كشت سلولی
16. It need not involve animals at all
17. Cosmetic products are not that necessary
18. There are already thousands of cosmetic products on the market
19. There is no need for further development and testing
20. Exploiting animals in this way is inhumane

Good luck!
