

Is adding connectivity of our home devices helpful or not?

Providing a convenient environment that connects s all devices together ~~it~~ makes life ~~more easy~~ easier.

Firstly, all devices are connected to a single ~~convenient system which~~ ~~to~~ controls ~~led~~ them. It can be a smart ~~thing~~ app or a smart home device. However, it is essential that they are ~~uses~~ internet-connected devices and also ~~superb~~ high quality connection.

Secondly, this can provide homeowners comfort, convenience and energy efficiency, often by a smart home app on their smartphone or other networked ~~ed~~ device. Homeowners s could set programs s for each one of them, so they regularly work.

Furthermore, this technology ~~does~~ not work in all ~~country~~ countries because of ~~no internet instability~~ internet. In my opinion, it is easy to connect all devices to the internet. And while most of the time they are ~~correct~~ connected, ~~but~~ ~~sometimes~~ s some ~~hiccups~~ bugs or poor internet can stop all electronic devices.

In conclusion, , I would like to say, , adding connectivity of home's devices is remarkable but I personally can not use it in my country because of lack of the internet.
