

As computers are more and more used in education, some people argue that in future there will be no role for teachers. Agree or disagree?

Using Computers and the Internet are amazing sources for knowledge and education. With ~~By changing~~ rapidly changing world of information technology, education is not exempt from this rule. Nowadays technology and knowledge are in the same way, so we could not achieve (one without the help of the other) technology without knowledge or we could not achieve technology without knowledge.

Computers are have amazing sources and have efficient facility for users, especially it is not restricted ~~It has no limit on to~~ time or and in place. ~~in~~ In other words, It ~~has~~ saves time. One thing we can emphasize is recommend that using computers needs to know how you can use it, so you should ask someone who is a teacher to teach you.

Genius smart schools and electronic universities are new types s of electronic learning, so they are against ~~to~~ traditional education. In traditional education because of physical presence of students and a teacher, also they will transmit knowledge face to face. ~~in~~ electronic universities have face to face relation, but in other ways s and places s. Electronic learning goes back to came back for 30 years ago. One advantage of electronic universities is saving save time and money, and also you don't waste your time in traffics.

Accordingly, using computers for education needs teachers and also the role of teachers has changed is change in other ways.
