

94.05.02 workshop FRI session 14 space travel

Space travel has long been a dream for mankind

It has the potential to bring about benefits

Technological advances and discoveries

About the universe

However

Living on another planet is unlikely to happen soon

Occupy/inhabit/colonize other planets

The applications of research

It has led to advances in computer technology

Heat-resistant materials

New ways of storing food

Questions like

Are we alone in the universe?

How did life start?

It can reveal valuable resources

That may one day be used on Earth

There are a number of obstacles

That need to be overcome

The cost would be restrictive

Nearby planets are inhospitable

Due to population demands of humanity

It won't be in the near future

Fuel-driven vehicles

Horse-drawn wagon

Stress-related disease

Fast food-related health issues

Good luck
